SUMMARY

BS Information Technology graduate focused on Data Analytics, with hands-on experience using Python, SQL, Pandas, NumPy, and visualization tools to analyze and transform complex datasets. Built practical projects involving financial analysis, pricing intelligence, product research, NLP, anomaly detection, and business intelligence. Strong foundation in data cleaning, EDA, statistical analysis, and machine learning, with a focus on turning data into clear insights and practical decisions. Seeking an entry-level Data Analyst opportunity.

EDUCATION

Quaid-e-Awam University of Engineering, Science & Technology

Bachelor of Science in Information Technology

2022 – 2026 | CGPA 3.21

Relevant Coursework: Database Management Systems, Statistics & Probability, Machine Learning, Object-Oriented Programming

TECHNICAL SKILLS

Languages & Libraries: Python, MySQL, PostgreSQL, MongoDB, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Machine Learning & AI: NLP, TF-IDF, Feature Engineering, Regression, Classification, Anomaly Detection, RAG

Data & Analytics: Exploratory Data Analysis (EDA), Statistical Modeling, Data Visualization, Data Cleaning

Tools & Platforms: Git, GitHub, Streamlit, Jupyter Notebook, Google Colab, Anaconda

Soft Skills: Problem Solving, Critical Thinking, Analytical Thinking, Adaptability, Teamwork & Collaboration

PROJECTS

Smart Expense Analyzer

- A personal finance dashboard that ingests bank transaction data, auto-categorizes expenses using regex heuristics, detects hidden recurring subscriptions, and flags anomalous spending via IQR-based statistical outlier detection.
- Forecasts next-month spending using moving averages, integrates optional LLM-driven financial summaries, and supports exportable PDF, CSV, and JSON reports.

AI Product Research Agent

- An adaptive product discovery system that scrapes and evaluates 200+ e-commerce product candidates, scores them using dynamic context-aware multi-factor weights, and surfaces opportunities with confidence levels and risk assessments.
- Generates concrete product launch plans complete with monetization signals and full unit economics to support data-driven go-to-market decisions.

AI-Powered Resume Analyzer

- A local-first resume analysis tool that parses PDF resumes, compares them against job descriptions using TF-IDF vectorization, identifies missing ATS keywords and formatting gaps, and computes an explainable match score (~85% accuracy on test cases).
- Produces section-by-section coaching with bullet rewrite suggestions and runs entirely offline without any external API dependency.

AI Pricing Intelligence Engine

- A decision-grade pricing system that analyzes market conditions through competitor clustering, simulates profit and loss across 50 price points, and tests business fragility via sensitivity analysis.
- Delivers actionable go/no-go pricing recommendations alongside 90-day revenue projections and fully exportable reports.

AI-Powered Startup Idea Validator

- A startup validation platform where you input a business concept and receive a full analysis covering SWOT breakdown, MVP scope, competitor mapping, and risk assessment, powered by a dynamic multi-factor heuristic scoring engine.
- Features interactive radar charts, SQLite-backed history versioning, and supports both LLM-powered analysis and a sophisticated rule-based fallback mode.

AI News Intelligence Dashboard

- An end-to-end news analysis platform that pulls live headlines from 25+ RSS sources, classifies articles into 13 topic clusters using TF-IDF cosine similarity, scores sentiment with VADER, and extracts geographic signals across 28 countries.
- Detects emerging keyword trends via temporal frequency analysis, generates extractive narrative summaries with optional LLM enhancement, and renders everything through an interactive Streamlit dashboard with no paid APIs required.
