

Meer Mehran Khan

Data Scientist & Analyst | Python Developer

Nawabshah, Pakistan | +92 300 3198286 | imeermehrankhan@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Quaid-e-Awam University of Engineering Science & Technology Nawabshah

2022 - 2026

Bachelor of Science in Information Technology

SKILLS

- Data Science
- Data Analysis
- Python
- Data Visualization
- NoSQL
- SQL
- Matplotlib
- Pandas
- NumPy
- Git & GitHub
- Critical Thinking
- Analytical Thinking
- Problem-Solving

PROJECTS

Smart Expense Analyzer

A personal finance dashboard that goes beyond simple tracking. It ingests bank transaction data, auto-categorizes expenses using regex heuristics, detects hidden recurring subscriptions, flags anomalous spending via IQR analysis, and forecasts next-month spending with moving averages. Also supports exportable PDF/CSV/JSON reports and optional LLM-driven financial summaries.

AI Product Research Agent

An adaptive product discovery system for e-commerce sellers. It discovers candidate products via scraping and offline data, engineers monetization signals, scores opportunities with dynamic context-aware weights, and generates concrete launch plans with confidence levels, risk assessments, and full unit economics.

AI-Powered Startup Idea Validator

A startup idea validation platform where you input a concept and get a full business analysis: SWOT breakdown, MVP scope, competitor mapping, and risk assessment. Features a dynamic multi-factor heuristic scoring engine, interactive radar charts, and history versioning with SQLite. Supports LLM analysis or a sophisticated rule-based fallback.

AI-Powered Resume Analyzer

A local-first resume analysis tool that parses PDF resumes, compares them against job descriptions, identifies missing keywords and ATS formatting gaps, and calculates an explainable match score. It also generates section-by-section coaching with bullet rewrite suggestions. No external API required, works entirely offline with TF-IDF or optional embeddings.

AI Pricing Intelligence Engine

A decision-grade pricing intelligence system for e-commerce products. It analyzes market conditions with competitor clustering, computes fully-loaded unit economics, tests business fragility via sensitivity analysis, and delivers actionable go/no-go pricing decisions. Features include full profit simulations across 50 price points, 90-day revenue projections, and exportable reports.
