SUMMARY

BS Information Technology graduate with hands-on experience turning raw data into actionable insights and building AI-powered applications. Proficient in Python, SQL, Pandas, Power BI, and Scikit-learn, with experience in data cleaning, EDA, statistical analysis, visualization, machine learning, and NLP. Built six end-to-end projects covering financial analytics, pricing intelligence, business intelligence, anomaly detection, and AI-powered decision support. Targeting entry-level Data Analyst or Junior Business Analyst roles.

EXPERIENCE

Qwetrum Technologies

Jun 2026 – Jul 2026

Data Analysis Intern, Remote

- Analyzed a 9,994-row retail dataset using Python and Pandas, identifying top-selling products, month-over-month revenue trends, seasonal patterns, and profitability across categories, regions, and discount tiers.
- Cleaned a Census Income dataset using mode-based imputation, removed 24 duplicate rows, standardized data types, converted strings to categorical data, and exported the processed dataset to CSV.
- Built Matplotlib and Seaborn visualizations for product performance, revenue trends, and category sales, translating analysis into clear, business-ready insights.

PROJECTS

AI News Intelligence Dashboard

- Built a news intelligence pipeline that ingests up to 200 articles per run from 25+ RSS sources (Reuters, BBC, NYT, TechCrunch, Al Jazeera), classifies content into 13 topic clusters using TF-IDF cosine similarity, scores per-article sentiment with VADER, and maps geographic signals across 28 countries; deployed as a Streamlit dashboard with local and optional LLM summarization.

Smart Expense Analyzer

- Developed a personal finance analytics tool that categorizes transactions via regex heuristics, flags anomalous spending and hidden subscriptions using IQR-based outlier detection, forecasts next-month expenses with moving averages, and generates reports in 3 formats (PDF, CSV, JSON) with optional LLM-driven financial summaries.

AI Pricing Intelligence Engine

- Engineered a pricing analysis tool that simulates P&L across 50 price points, clusters competitor pricing data, and runs sensitivity analysis to stress-test business assumptions; outputs 90-day revenue projections and go/no-go pricing decisions in exportable report format.

AI-Powered Resume Analyzer

- Built a local-first resume analysis tool that parses PDF files and compares candidates against job descriptions via TF-IDF vectorization to surface ATS keyword gaps; outputs a scored match report (~85% accuracy on test cases) with section-level rewrite coaching; operates fully offline.

AI Product Research Agent

- Designed a product discovery pipeline that evaluates 200+ e-commerce candidates using multi-factor weighted scoring with confidence levels and risk indicators; generates structured launch plans with unit economics to support data-driven go-to-market decisions.

AI-Powered Startup Idea Validator

- Generates a full business concept analysis (SWOT breakdown, MVP scope, competitor mapping, and multi-factor risk scoring) from a single idea input; features interactive radar charts, SQLite-backed session history, and LLM-powered and rule-based fallback analysis modes.

EDUCATION

Quaid-e-Awam University of Engineering, Science & Technology

Dec 2022 – Aug 2026

Bachelor of Science in Information Technology

CGPA: 3.21

TECHNICAL SKILLS

Programming & Databases: Python, SQL, MySQL, PostgreSQL, MongoDB, SQLite

Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning, Data Transformation, Data Validation, Data Wrangling, Statistical Analysis, Descriptive Statistics, Trend Analysis, Outlier Detection, Anomaly Detection

Data Visualization & Business Intelligence: Power BI, Matplotlib, Seaborn, Dashboard Development, Reporting, DAX

Machine Learning & AI: Scikit-learn, Regression, Classification, Feature Engineering, Model Evaluation, Natural Language Processing (NLP), Sentiment Analysis

Tools & Platforms: Git, GitHub, Jupyter Notebook, Google Colab, Anaconda, Streamlit, Docker, Excel
